

Carbon accounting made easy

Track and report your carbon emissions directly within Business Central. Start your journey to net zero today!

Companies face increasing pressure to reduce their carbon footprint to comply with regulations and meet stakeholder expectations. However, carbon accounting is complex and time-consuming—especially if you're doing everything manually.

Streamlined carbon management

Easily track, manage, and report your company's emissions with Continia Sustainability, an end-to-end solution built within your Microsoft Dynamics 365 Business Central.

This powerful solution simplifies carbon accounting, helping you achieve your sustainability goals, avoid the financial risks of carbon liabilities, and comply with new government regulations.

Accurately calculate your carbon emissions

Continia Sustainability streamlines your carbon accounting by automatically converting your financial data in Business Central into carbon dioxide equivalents. You only need to set the solution up once—from there, it will continuously calculate and allocate your data according to the GHG Protocol's three scopes and fifteen categories.

Use both activity-based and spend-based methods for precise carbon accounting. With this flexibility, you can easily meet regulatory requirements and choose the best approach for your business needs.

Integrated with Expense Management and Document Capture

Efficiently collect and manage your data with seamless integration to Continia Expense Management and Continia Document Capture. Automatically pull financial data from travel expenses, purchase invoices, and ledger entries to accurately calculate your emissions and streamline sustainability reporting.

With additional environmental data columns, tracking your output becomes an integral part of your finance processes. Specify details such as the environmental account, emission type, energy or water usage, items purchased, or fuel consumed to enhance your reporting and sustainability efforts.

Key benefits & features

Accredited emission factors datasets

Ensure accurate carbon footprint calculations with 50,000+ built-in emission factors from official sources. You can also add your own for more precise reporting.

Streamlined data import

Seamlessly import environmental and financial data, such as purchase invoices, G/L account, and item ledger entries, into your environmental journals.

Automatic calculation and allocation

Automatically calculate your emissions and allocate them into the correct scope(s) and categories based on your chosen consolidation approach.

GHG-aligned emission reporting

Get reliable carbon reports you can trust. Categorize your emissions by scope and category according to the GHG Protocol standards for consistent and comparable data.
